### THE ECONOMIC IMPACT OF UNIVERSITY SYSTEM OF GEORGIA INSTITUTIONS ON THEIR REGIONAL ECONOMIES IN FISCAL YEARS 2000 AND 2001

#### **EXECUTIVE SUMMARY**

Using data from the two most recent fiscal years this report calculates the economic benefits that the University System of Georgia's 34 institutions bring to their home regions and communities. The benefits are estimated for three important categories of college/university-related expenditures:

- (1) spending by the institutions themselves for salaries and fringe benefits, operating supplies and expenses, and other budgeted expenditures;
- (2) spending by the institutions for capital projects (construction); and
- (3) spending by the students who attend the institutions.

The economic impact estimates are based on regional input-output models of each institution's regional economy, certain necessary assumptions, and readily available data regarding annual spending in the three specified categories. Moreover, the emphasis is on funds received by residents of the region that hosts each institution of higher education.

In the simplest terms, the total economic impact of all 34 University System institutions on their host communities was \$8.0 billion in FY 2001 down by 2.1 percent or \$174 million, from the FY 2000 total of \$8.2 billion. The output of each institution is the change in regional output that is due to spending by the institution (including capital projects) and spending by the students who attend that particular college or university. Of the FY 2001 total, \$5.1 billion (63 percent) is the initial spending by the institutions and students; \$3.0 billion (37 percent) is the induced or re-spending (multiplier) impact. Dividing the FY 2001 total output impact (8.0 billion) by initial spending by institutions and students (\$5.1 billion) yields an average multiplier value of 1.56. On average, therefore, every dollar of initial spending generates an additional 56 cents for the economy of the region hosting the institution.

In FY 2001, value added comprises \$4.8 billion (60 percent) of the \$8.0 billion output impact, with domestic and foreign trade comprising the remainder \$3.5 billion (40 percent) of the output impact. The \$4.8 billion value-added impact reported for FY 2001 equals almost 2 percent of Georgia's gross state product. Labor income received by residents of the communities that host one or more institutions equals \$3.8 billion, and represents 79 percent of the value-added impact.

The collective or rolled-up employment impact of all 34 institutions on their host communities in FY 2001, including multiplier effects, is 101,427 jobs. Approximately 43 percent of these positions are on campus – employees of the University System of Georgia – add 57 percent are off-campus jobs in either the private or public sectors. On average, for each job created on campus, there are 1.4 off-campus jobs that exist because of spending related to the institution. The 101,427 jobs generated by the University System of Georgia account for 2.8 percent of all the jobs in Georgia, or about one job in 37.

In addition to the FY 2001 information summarized here, the full report includes economic impact data for each of the 34 institutions as well as a detailed template (with instructions) that individual institutions may use to calculate its specific local impact in fiscal year 2002.

<sup>1</sup> The impacts of spending on Output, Value-Added, Labor Income, and Employment were estimated using the IMPLAN system, version 2.0 and Type SAM multipliers.

- 3 Initial spending for Capital Projects Funded were obtained from the report entitled, "The University System of Georgia, Capital Projects Recent State Funding History (diskette).
- 4 Initial spending for Students Personal Expenditures were estimated by the author based on data obtained from the Quarterly and Semester Enrollment Reports issued by the Board of Regents of the University System of Georgia; the Bureau of Labor Statistics' 1997 Consumer Expenditure Survey; and Personal Consumption Expenditures issued by the Bureau of Economic Analysis.
- 5 Output refers to the value of total production, including domestic and foreign trade.
- 6 Value Added includes employee compensation (including fringe benefits), proprietary income, other property type income (e.g., rents, royalties, dividends), and indirect business taxes (e.g. excise taxes, property taxes, fees, licenses, and sales taxes paid by businesses).
- 7 Labor income included both the total payroll costs (including fringe benefits) of workers who are paid by employers and payments received by self-employed individuals.
- 8 Employment includes both full-time and part-time jobs.

<sup>2</sup> Initial spending for Budget Unit "A" and Unit "B" were obtained from the report entitled, "The University System of Georgia Budget 1999-00 and 2000-01," published by the Board of Regents of the University System of Georgia.

ow much does a region benefit economically from hosting an institution of higher education? Traditionally, the benefits are discussed in broad, qualitative terms that fait to satisfy those who demand tangible evidence of the economic linkages between the academic community and the community as a whole; however, this report quantifies the economic benefits that the University System of Georgia's 34 institutions convey to the communities in which they are located.

The benefits are estimated for three important categories of college/university-related expenditures:

- (1) spending by the institutions themselves for salaries and fringe benefits, operating supplies and expenses, and other budgeted expenditures:
- (2) spending by the institutions for capital projects (construction); and
- (3) spending by the students who attend the institutions.

The economic impact estimates are based on regional input-output models of each institutions regional economy, certain necessary assumptions, and readily available data regarding annual spending in the three specified categories. Moreover, the emphasis is on funds received by residents of the region that hosts each institution of higher education. The study reports expenditures and impacts for fiscal years 2000 (July 1, 1999) through June 30, 2000) and 2001 (July 1, 2000 through June 30, 2001).

The study does not account for all of the short-term impacts of the 34 institutions of their host communities, however. For example, several sources of college/university-related spending are identified, but no dollar amounts are estimated for them, because this would require collecting survey data, a task beyond the resources available to this project. It also does not quantify the many long-term benefits flowing to the economic development of the host communities through the presence of an institution of higher education, or measure intangible benefits (such as cultural opportunities, intellectual stimulation, and volunteer work) to residents of their host communities. Finally, the study is not a net benefit analysis; it estimates only economic benefits and does not calculate what the presence of a tax-exempt college/university cost the community.

The five-part study discusses economic impact highlights, describes the economic impact concept, and summarizes methodology and results, limitations, and conclusions.

#### **ECONOMIC IMPACT HIGHLIGHTS**

In the simplest and broadest terms, the total economic impact of all 34 institutions of the University System of Georgia on their host communities was \$8.0 billion in FY 2001, down by 2.1 percent or \$174 million, from the FY 2000 total of \$8.2 billion. The output impact of each institution is the change in regional output that is due to spending by the institution (including capital projects) and spending by the students who attend the institution. Of the FY 2001 total, \$5.1 billion (63 percent) is the initial spending by the institutions and students; \$3.0 billion (37 percent) is the induced or re-spending (multiplier) impact. Dividing the FY 2001 total output impact (\$8.0 billion) by initial spending by the institutions and students (\$5.1 billion) yields an average multiplier value of 1.56. On average, therefore, every dollar of initial spending generates an additional 56 cents for the economy of the region hosting the institution.

In FY 2001, value added comprises \$4.8 billion (60 percent) of the \$8.0 billion output impact, with domestic and foreign trade comprising the remainder \$3.5 billion (40 percent) of the output impact. The \$4.8 billion value-added impact reported for FY 2000 equals almost 2 percent of Georgia's gross state product. Labor income received by residents of the communities that host one or more institutions equals \$3.8 billion, and represents 79 percent of the value-added impact.

The collective or roll-up employment impact of all 34 institutions on their host communities in FY 2000, including multiplier effects, is 101,427 jobs. Approximately 43 percent of these positions are on campus employees of the University System of Georgia—and 57 percent are off-campus jobs in either the private or public sectors. On average, for each job created on campus, there are 1.4 off-campus jobs that exist because of spending related to the institution. The 101,427 jobs generated by the University System of Georgia account for 2.8 percent of all the jobs in Georgia, or about one job in 37.

#### UNDERSTANDING THE CONCEPT OF ECONOMIC IMPACT

Short-term economic impacts are the net changes in regional output, value added, labor income, and employment that are due to new dollars flowing into a region from a given enterprise or event of economic development. In this study, the enterprises or event of economic development are the 34 institutions of the University System of Georgia and the regions are the host communities, which include in the value added, labor income, and employment impact estimates, but the output impacts include both domestic and foreign trade.

Economists speak of economic impacts in terms of the changes in output, value added, labor income, or employment that occur in the region's industries (including households) when they produce goods and services to satisfy demand by consumers, businesses, investors, or governments that are from outside the region. Throughout this study, expenditures that represent the regional repercussions of spending originating from outside the region are counted as economic impacts. Because local residents who want to attend college or university often would have to relocate to another area, the spending of the area's residents who are students at an institution of the University System of Georgia also counts as an economic impact. Expenditures that immediately flow to recipients located outside the region, however, are not counted as economic impacts.

For goods made outside of the region, local value is created by wholesale and retail firms within the region, but not by the manufacturing firms that originally produced the goods elsewhere. So when these goods are purchased locally, the benefit to the region's economy consists only of the wholesale and retail margins. For example, since the petroleum production and refining industry is not present in the host regions, the portion of student's expenditures for gasoline that represents a payment to producers and refiners is not a local economic impact, but the portion that represents payments to local retail, wholesale, and distribution companies is counted as a local economic impact.

#### **METHODOLOGY AND RESULTS**

Estimating the economic impact of University System of Georgia institutions on their regional economies in FY 2000 and in 2001 involved four distinct steps. First, initial spending and employment for each institution were obtained for Budget Unit "A" and Budget Unit "B"; and then the institutional expenditures associated with capital projects (construction) funded were obtained for each institution and allocated to the appropriate industrial sector. Third, spending by students was estimated based on each institution's enrollment reports and on data obtained from both the U.S. Bureau of Labor Statistics and the U.S. Bureau of Economic Analysis. Students' personal expenditures then were allocated to industrial sectors. Finally, the IMPLAN Professional Version 2.0 modeling system was used to build regional economic models that are specific to each institution. The study area for each institution's regional model, which includes the institution as well as the labor force directly involved, is based on standard county classifications and are reported for all 34 institutions in Appendix 2.

For analytical purposes, all dollar amounts were converted to inflations-adjusted 1996 dollars, but the amounts expressed in this report are re-inflated to current dollars. Using the IMPLAN model and Type SAM multipliers, impacts associated with all categories of initial spending then are estimated in terms of output, value added, labor income, and employment. Type SAM multipliers capture the original expenditures resulting from the impact, the indirect effects of industries buying from industries, and the induced effects of household expenditures based on information in the social account matrix; and also account for Social Security and income tax leakage, institutional savings, commuting, and inter-institutional transfers. Wherever appropriate, the IMPLAN software applied margins to convert purchaser prices to producer prices. In addition, the entire analysis was conducted using the full range of industrial sectors in order to avoid aggregation bias.

#### • Initial Spending by the Institutions: Budget Unit "A" and Unit "B"

Institution-specific data on total budgeted expenditures, travel, operating supplies and expenses, equipment, salaries and fringe benefits, and EFT positions (employment) were obtained from the report entitled *The University System of Georgia Budget 1999-2000*, published by the Board of Regents. Data were obtained for Budget Unit "A" and Budget Unit "B" for both FY 2000 and FY 2001. These amounts were treated as an industry change and are reported in the first column of Tables 2 and 3, respectively. Expenditures include spending for general operations, special initiative funds, lottery funds, research consortium, departmental services, and sponsored operations. To avoid double counting, the estimates of initial spending exclude expenditures arising from two budgetary classes: auxiliary enterprise funds (self-supporting activities for housing, food service, bookstore, athletics, and other) and student activity funds (cultural and recreations programs operated by students). The spending associated with such activities is included in the student's personal expenditures, however.

Since a detailed analysis of spending patterns at each institution is not practical, budgeted expenditures are allocated to various economic sectors based on a typical expenditure pattern estimated for U.S. colleges that was developed by the IMPLAN 2.0 modelers. For each institution, however, the "typical" sectoring scheme is modified to reflect that institution's EFT positions and it's spending for personnel services.

### Capital Projects Funded

Institution-specific data on capital project (construction) funded were obtained on diskette from the Board of Regents. The expenditures were allocated to the year of reported funding, regardless of whether or not all of the funds actually were spent during that fiscal year. The amounts for FY 2000 and FY 2001 are reported in the first column of Tables 2 and 3, respectively. Budgeted funds were allocated to the appropriate IMPLAN 2.0 industrial sector.

#### • Students' Personal Expenditures

The students who attend an educational institution spend significant amounts of money in the local economy as a part of their living expenses, so the dollar value of this spending—based on average spending per quarter or semester for all items except tuition and fees—also is estimated. Since a detailed survey of students' spending habits at each institution is impossible, the expenditure estimates primarily are based on data obtained from the 1997 Consumer Expenditure Survey released on the Internet by the U.S. Bureau of Labor Statistics (BLS) on September 8, 1998. Although expenditure data cover consumer units consisting of one person at the lowest income level, no data are available expressly for college students; therefore, in order to adapt the data for this study, spending estimates for several categories of goods or services are increased, decreased, or eliminated. For example, expenditures for books are increased substantially, while expenditures for education are eliminated because of possible double counting. (System institutions receive payments from students for tuition and fees, which in turn support the institutions' expenditures, which has already been estimated.) After adjustment, for both Fall Semester 2000 and Spring Semester 2001, the average expenditure per student is estimated at \$4,775. These amounts do not include tuition and fees.

Many institutions also prepare annual estimates of the estimated cost of attendance, and although such estimates are not detailed enough to be used in the IMPLAN modeling system, they do provide useful comparisons. For example, The University of Georgia's Office of Student Financial Aid indicates that the cost of attendance for undergraduates and graduates who lived off campus in FY 2001 (the 2000-01 academic year) was \$4,899 per semester (excluding tuition and fees). For students who live on campus, the Financial Aid Office estimates costs of \$3,790 per semester for undergraduates and graduate students.

Moreover, students residing in the study area are assumed to make all of their attendance-related purchases in the local economy, while those who lived outside the study area are assumed to make no attendance-related purchases (except for tuition and fees) locally. For all institutions, it is assumed that 95 percent of the students reside in the study area and 5 percent live outside it. Expenditures are distributed to the

IMPLAN sectoring scheme based on both national average expenditure patterns and data provided by the 1997 Consumer Expenditure Survey already described.

The final step in estimating students' personal expenditures is to multiply the number of quarters or semesters of student spending by the average spending per respective quarter or semester. For FY 2000 and FY 2001, these amounts are reported in the first column of Tables 2 and 3. The number of quarters or semesters of students' spending equals 95 percent of each institution's EFT enrollment as reported in the Quarterly and Semester Enrollment Reports issued by the Board of Regents.

#### ■ Total Initial Spending

For each institution, total initial spending accruing to the institution's regional economy is the sum of spending originating from Budget Unit "A" and Budget Unit "B", spending due to capital projects funded, and students' personal expenditures. For FY 2000 and FY 2001, total initial spending for all 34 institutions is \$5.2 billion and \$5.1 billion, respectively—a-year-over-year percentage decrease of 2 percent.

In FY 2001, spending originating from Budget Unit "A" and Budget Unit "B" accounted for 69.2 percent (\$3.6 billion) of initial spending, spending due to capital project funded accounted for \$2.9 percent (\$147 million), and students' personal expenditures accounted for 28 percent (\$1.4 billion) of initial spending. In FY 2000, spending originating from Budget Unit "A" and Budget Unit "B" accounted for 66.9 percent (\$3.5 billion) of initial spending, spending due to capital projects funded accounted for 6.6 percent (\$347 million), and students' personal expenditures accounted for 26.5 percent (\$1.4 billion).

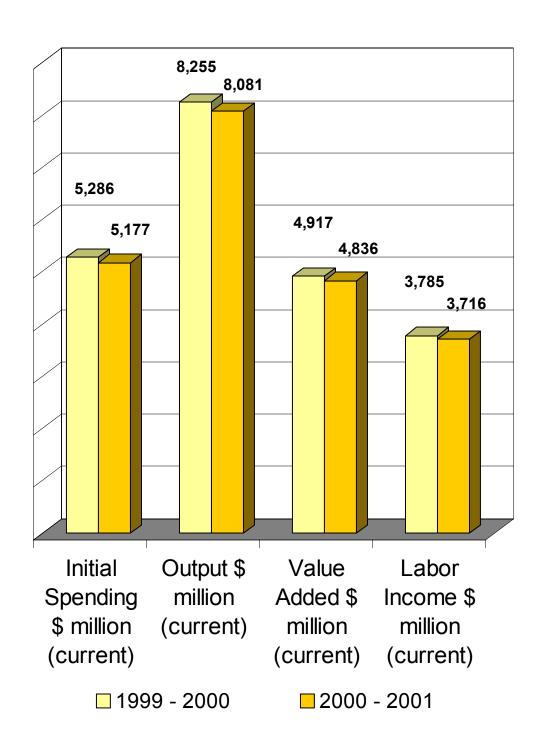

Initial spending for each institution of the University System of Georgia for FY 2000 and FY2001 is reported on the first column of Tables 2 and 3, respectively.

#### ■ Total Output Impact

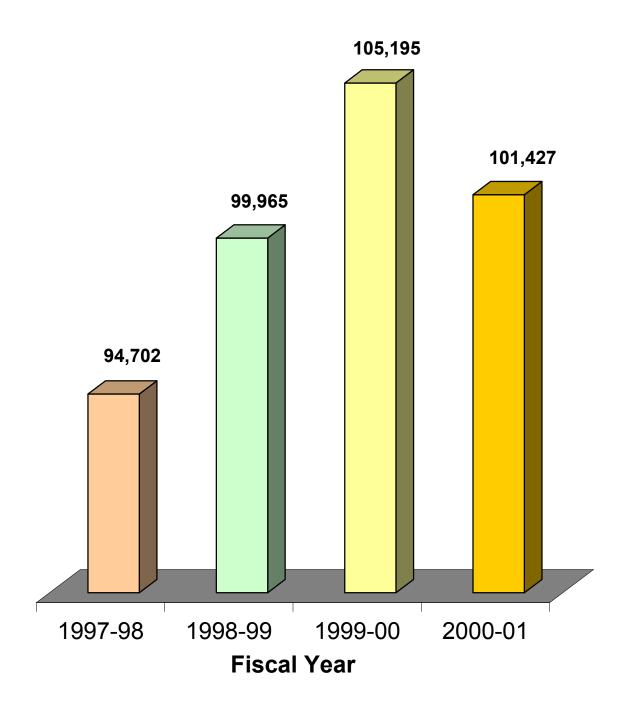

Output impacts, which are the most inclusive, largest, measure of economic impact, include both initial spending and the impacts generated by the re-spending of these amounts. Because of their size, output impacts typically are emphasized in economic impact studies and receive much media attention.

For each category of initial spending, an IMPLAN 2.0 model of the institution's regional economy is used to calculate the total output impact of that institution (shown in the second column of Tables 2 and 3, respectively). Collectively, the 34 institutions of the University System of Georgia generated an output impact on their host regions of \$8.0 billion in FY 2001 and \$8.2 billion in FY 2000—a year-over-year percentage decrease of 2.1 percent. For all institutions combined, the output impact of the 34 institutions was 1.6 times greater than their initial spending.

#### ■ Total Value-Added Impact

Because value-added impacts exclude expenditures related to foreign and domestic trade, they provide a much more accurate measure of the actual economic benefits flowing to businesses and households in a region than the more inclusive output impacts.

Collectively, the 34 University System institutions generated a value-added impact of \$4.8 billion—almost 2 percent of Georgia's gross state product—in FY 2001 and \$4.9 billion in FY 2000, a decrease of 1.6 percent. For all institutions combined, the value-added impact equaled 93.4 percent of initial spending in FY 2001 and 91 percent of initial spending in FY 2000. Value-added impacts for the individual institutions are reported in the third column of Tables 2 and 3, respectively.

#### ■ Labor Income Impacts

The IMPLAN 2.0 model also is used to calculate impacts in terms of labor income. Collectively, the 34 University System institutions generated a labor income of \$3.7 billion in FY 2001 and \$3.8 billion in FY 2000, a decrease of 2 percent. For all institutions combined, the labor income impact equaled 72 percent of initial spending FY 2001 and 72 percent of initial spending in FY 2000. Labor income by fiscal year for each institution is reported in the fourth column of Tables 2 and 3.

#### Employment Impacts

The economic impact of hosting a unit of the University System of Georgia probably is most easily understood in terms of its effects on employment. Collectively, the 34 institutions generated an employment impact 101,427 jobs in FY 2001 and 105,195 jobs in FY 2000—a decrease of 3.6 percent. Approximately 43 percent of these positions are on campus (University System employees), and 57 percent are off-campus jobs either the private or public sectors. On average, for each job created on campus there are 1.4 off-campus jobs that exist because of spending related to the University System of Georgia (Tables 4 and 5).

The employment impact associated with the University System accounts for 2.8 percent of all the jobs held by Georgians, or about one job in 37. For all institutions combined, 19.6 jobs were generated for each million dollars of initial spending in FY 2001. Similarly, 20.0 jobs were generated for each million dollars of initial spending in FY 2000. Employment impacts for the individual institutions are reported in the fifth column of Tables 2 and 3.

#### **LIMITATIONS**

**B**ecause the goal of this study is to estimate the economic impact of all 34 institutions, certain necessary assumptions were designed to work well for the average institution makes to its host community.

Several important types of short-term college or university-related expenditures are not estimated, including spending by visitors and spending by retirees who live in the host communities. Expenditures supported by System employees' non-institutional income also are not estimated. Such income may result from an employee's consulting, investments, and other personal business activities, and often would not come to the host community if that person's job at the college/university did not exist.

Perhaps the greatest limitation of this report is that no attempt is made to evaluate the long-term impacts of the University System's institutions on the economic development of the host communities and the state. Colleges and universities not only spend money year by year, but also have long-term impacts on the labor force, local business and industry, and local government. A college or university improves the skills of its graduates, thereby increasing their productivity and their lifetime earnings; and local businesses benefit from easy access to a large pool of part-time and full-time workers. These benefits are particular important when employment rates are low and labor markets are tight. Moreover, companies and agencies that depend in highly specialized skills often cluster around universities, and this may be particularly true of high-tech and

information-based companies—which are expected to account for a disproportionately large share of future economic growth.

In addition, the outreach and service units of the college or university provide valuable services to local businesses, government, and households. Moreover, cultural and educational programs and facilities often are available to the general public and provide intangible benefits to the host community by improving local residents' quality of life.

#### **CONCLUSIONS**

To the extent that currently available information allows, this report estimates some of the economic benefits that hosting a unit of the University System of Georgia brings to a community. In the simplest terms, the collective or rolled-up economic impact of all 34 institutions on their host communities was \$8.0 billion in FY 2001, down by 2.1 percent from the FY 2000 impact of \$8.2 billion. This amount represents the impact of spending by the institution (including capital projects) and spending by students. Of the \$8.0 billion output impact, \$6.2 billion was generated by the institutions' expenditures and \$1.9 billion by students' expenditures. In addition, the University System of Georgia added \$3.7 billion in labor income to the economies of the regions that host colleges/universities and over 100,000 jobs.

The actual impact is much higher than these estimates, however, because the study's limited scope does not include the short-term impacts of spending by visitors, retirees, and non-universities-related income received by University System employees. Furthermore, the study does not measure any of the long-term benefits of the University System of Georgia to the state's economic development, quality of life, or the increased lifetime earnings of its graduates.  $\blacksquare$

<sup>1</sup> The impacts of spending on Output, Value-Added, Labor Income, and Employment were estimated using the IMPLAN system, version 2.0 and Type SAM multipliers.

- 3 Initial spending for Capital Projects Funded were obtained from the report entitled, "The University System of Georgia, Capital Projects Recent State Funding History (diskette).
- 4 Initial spending for Students Personal Expenditures were estimated by the author based on data obtained from the Quarterly and Semester Enrollment Reports issued by the Board of Regents of the University System of Georgia; the Bureau of Labor Statistics' 1997 Consumer Expenditure Survey; and Personal Consumption Expenditures issued by the Bureau of Economic Analysis.
- 5 Output refers to the value of total production, including domestic and foreign trade.
- 6 Value Added includes employee compensation (including fringe benefits), proprietary income, other property type income (e.g., rents, royalties, dividends), and indirect business taxes (e.g. excise taxes, property taxes, fees, licenses, and sales taxes paid by businesses).
- 7 Labor income included both the total payroll costs (including fringe benefits) of workers who are paid by employers and payments received by self-employed individuals.
- 8 Employment includes both full-time and part-time jobs.

<sup>2</sup> Initial spending for Budget Unit "A" and Unit "B" were obtained from the report entitled, "The University System of Georgia Budget 1999-00 and 2000-01," published by the Board of Regents of the University System of Georgia.

Table 2

Total Economic Impact of University System of Georgia

Institutions on their Regional Economies in the 1999 - 2000 Fiscal Year<sup>1</sup>

<u>Institution</u>	Initial Spending <sup>2,3,4</sup> (current dollars)	Output <sup>5</sup> Impact (current dollars)	Value Added <sup>6</sup> Impact (current dollars)	Labor Income <sup>7</sup> Impact (current dollars)	Employment <sup>8</sup> Impact (jobs)

#### Table 2 (continued)

- 1 The impacts of spending on Output, Value-Added, Labor Income, and Employment were estimated using the IMPLAN system, version 2.0 and Type SAM multipliers.
- 2 Initial spending for Budget Unit "A" and Unit "B" were obtained from the report entitled, "The University System of Georgia Budget 1999-00 and 2000-01," published by the Board of Regents of the University System of Georgia.
- 3 Initial spending for Capital Projects Funded were obtained from the report entitled, "The University System of Georgia, Capital Projects Recent State Funding History (diskette).
- 4 Initial spending for Students Personal Expenditures were estimated by the author based on data obtained from the Quarterly and Semester Enrollment Reports issued by the Board of Regents of the University System of Georgia; the Bureau of Labor Statistics' 1997 Consumer Expenditure Survey; and Personal Consumption Expenditures issued by the Bureau of Economic Analysis.
- 5 Output refers to the value of total production, including domestic and foreign trade.
- 6 Value Added includes employee compensation (including fringe benefits), proprietary income, other property type income (e.g., rents, royalties, dividends), and indirect business taxes (e.g. excise taxes, property taxes, fees, licenses, and sales taxes paid by businesses).
- 7 Labor income included both the total payroll costs (including fringe benefits) of workers who are paid by employers and payments received by self-employed individuals.
- 8 Employment includes both full-time and part-time jobs.

#### Table 3 (continued)

- 1 The impacts of spending on Output, Value-Added, Labor Income, and Employment were estimated using the IMPLAN system, version 2.0 and Type SAM multipliers.
- 2 Initial spending for Budget Unit "A" and Unit "B" were obtained from the report entitled, "The University System of Georgia Budget 1999-00 and 2000-01," published by the Board of Regents of the University System of Georgia.
- 3 Initial spending for Capital Projects Funded were obtained from the report entitled, "The University System of Georgia, Capital Projects Recent State Funding History (diskette).
- 4 Initial spending for Students Personal Expenditures were estimated by the author based on data obtained from the Quarterly and Semester Enrollment Reports issued by the Board of Regents of the University System of Georgia; the Bureau of Labor Statistics' 1997 Consumer Expenditure Survey; and Personal Consumption Expenditures issued by the Bureau of Economic Analysis.
- 5 Output refers to the value of total production, including domestic and foreign trade.
- 6 Value Added includes employee compensation (including fringe benefits), proprietary income, other property type income (e.g., rents, royalties, dividends), and indirect business taxes (e.g. excise taxes, property taxes, fees, licenses, and sales taxes paid by businesses).
- 7 Labor income included both the total payroll costs (including fringe benefits) of workers who are paid by employers and payments received by self-employed individuals.
- 8 Employment includes both full-time and part-time jobs.

#### APPENDIX ONE: A TEMPLATE FOR ESTIMATING ECONOMIC IMPACTS

Exhibit A-1 provides a template to estimate the economic impact of each institution of the University System of Georgia for FY 2000 (July 1, 1999 through June 30, 2000), FY 2001 (July 1, 2000 through June 30, 2001), and FY 2002 (July 1, 2001 through June 30, 2002). This template relies on simple multipliers derived from the more precise model-based estimates calculated for FY 1999 and FY 1998. The multipliers are reported in Exhibit A-2. Although economic impact estimates based on the template will be less accurate than those produced by an updated regional input-output model, they provide an inexpensive and relatively easy way to update the results reported for FY 1998 and FY 1999.

The template consists of four parts. Part 1 estimates the economic impact of spending by the institutions themselves for salaries and fringe benefits, operating supplies and expenses, and other budgeted expenditures. Part 2 estimates the economic impact of spending by the institutions for capital projects (construction). Part 3 estimates the economic impact of spending by the students who attend each institution. Finally, Part 4 provides total economic impacts in terms of output, value added, labor income, and employment.

#### Instructions

Part One | Estimating the Economic Impact of Spending by the Institution

Lines 1, 2, and 3: Total budgeted expenditures can be obtained from the report *The University System of Georgia Budget*, which is issued annually by the Board of Regents of the University System of Georgia. Expenditures for each institution are reported by fiscal year for the most recent three fiscal years. Expenditures for Budget Unit "A" and Budget Unit "B" are reported separately, however. Because all institutions are included in the "A" budget, the **budgeted expenditure amount from budget "A"** should be entered on line 1 of the worksheet. Institutions with items in Budget Unit "B" should enter such expenditures on line 2. The sum of the amounts in row 1 and row 2 should be entered into line 3 (Initial Spending).

Lines 4 and 5: Output multipliers specific to each institution's "A" and "B" budgets are reported in column 1 of Exhibit A-2. Enter the value on line 4. Multiply the dollar amount entered on line 3 by the multiplier entered on line 4 to estimate the output impact of spending by the institution.

Lines 6 and 7: Value-added multipliers specific to each institution's "A and "B" budgets are reported in column 2 of Exhibit A-2. Enter the value on line 6. Multiply the dollar amount entered on line 3 by the value-added multiplier entered on line 6 to estimate the value-added impact of spending by the institution.

Lines 8 and 9: Labor income multipliers specific to each institution's "A" and "B" budgets are reported in column 3 of Exhibit A-2. Enter the value on line 8. Multiply the dollar amount entered on line 3 by the labor income multiplier entered on line 8 to estimate the labor income impact of spending by the institution.

Line 10: Employment multipliers estimate the number of jobs generated per million dollars in spending, so divide the dollar amount entered on line 3 by 1,000,000.

Line 11: Due to the effects of inflation, the value of an employment multiplier will decline each year. The inflation-adjusted employment multipliers specific to each institution's "A" and "B" budgets are reported in columns 4-6 of Exhibit A-2. If the budgeted expenditure is for FY 2000, enter the employment multiplier from column 4; if it is for FY 2001, enter the employment multiplier from column 5; and if it is for FY 2001, enter the employment multiplier from column 6.

Line 12: Multiply the dollar amount entered on line 10 by the employment multiplier entered on line 11 to estimate the employment impact of spending by the institution.

Part Two

Estimating the Economic Impact of Capital Projects Funded

Line 13: Spending for capital projects funded can be obtained from the Board of Regents of the University System of Georgia, Capital Projects Recent Funding History (diskette). Some institutions may have more than one project funded in a single fiscal year, so it is important to check the entire list of projects and enter the sum of all projects funded within the fiscal year. [Note: This template allocates all expenditures to the year of reported funding, regardless of whether or not all of the funds were actually spent during that fiscal year.]

Lines 14 and 15: Output multipliers specific to each institution's capital projects are reported in column 1 of Exhibit A-2. Enter the value on line 14. Multiply the dollar amount entered on line 13 by the multiplier entered on line 14 to estimate the output impact of spending by the institution.

Lines 16 and 17: Value-added multipliers specific to each institution's capital projects are reported in column 2 of Exhibit A-2. Enter the value on line 16. Multiply the dollar amount entered on line 13 by the value-added multiplier entered on line 16 to estimate the value- added impact of spending by the institution.

Lines 18 and 19: Labor income multipliers specific to each institution's "A" and "B" budgets are reported in column 3 of Exhibit A-2. Enter the value on line 18. Multiply the dollar amount entered on line 13 by the labor income multiplier entered on line 18 to estimate the labor income impact of spending by the institution.

Line 20: Because employment multipliers estimate the number of jobs generated per million dollars in spending, divide the dollar amount entered on line 13 by 1,000,000.

Line 21: Due to the effects of inflation, the value of an employment multiplier will decline each year. The inflation-adjusted employment multipliers specific to each institution's "A" and "B" budgets are reported in columns 4-6 Exhibit A-2. If the budgeted expenditure is for FY 2000, enter the employment multiplier from column 4; if it is for FY 2001, enter the employment multiplier from column 5; and if it is for FY 2001, enter the employment multiplier from column 6.

Line 22: Multiply the dollar amount entered on line 20 by the employment multiplier entered on line 21 to estimate the employment impact of spending by the institution.

Part Three

Estimating the Economic Impact of Spending by Students

Lines 23, 24, and 25: The EFT enrollment for all institutions can be obtained from the Semester Enrollment Reports issued by the Office of Planning and Policy Analysis, Board of Regents of the University System of Georgia.

Lines 26, 27, and 28: Because it is assumed that 5 percent of students live outside the study area, multiply the EFT enrollment for each semester by 0.95.

Lines 29 and 30: Because Summer Semester is shorter than both Fall and Spring Semesters, the average spending per EFT student varies. Also, over time, average spending increased due to the effects of inflation. Enter the values corresponding to the appropriate fiscal year.

Line 31: Multiply the number of students on line 26 by the average spending per EFT student on line 29.

Line 32: Multiply the number of students on line 27 by the average spending per EFT student on line 30.

Line 33: Multiply the number of students on line 28 by the average spending per EFT student on line 30.

Line 34: Add the dollar amounts on lines 31, 32, and 33.

Lines 35 and 36: Output multipliers specific to each institution's capital projects are reported in column 1 of Exhibit A-2. Enter the value on line 35. Multiply the dollar amount entered on line 34 by the multiplier entered on line 35 to estimate the output impact of spending by the institution.

Lines 37 and 38: Value-added multipliers specific to each institution's capital projects are reported in column 2 of Exhibit A-2. Enter the value on line 37. Multiply the dollar amount entered on line 34 by the value-added multiplier entered on line 37 to estimate the value-added impact of spending by the institution.

Lines 39 and 40: Labor income multipliers specific to each institution's "A" and "B" budgets are reported in column 3 of Exhibit A-2. Enter the value on line 39. Multiply the dollar amount entered on line 34 by the labor income multiplier entered on line 39 to estimate the labor income impact of spending by the institution.

Line 41: Because employment multipliers estimate the number of jobs generated per million dollars in spending, divide the dollar amount entered on line 34 by 1,000,000.

Line 42: Due to the effects of inflation, the value of an employment multiplier will decline each year. The inflation-adjusted employment multipliers specific to each institution's "A" and "B" budgets are reported in columns 4-6 of Exhibit A-2. If the budgeted expenditure is for FY 2000, enter the employment multiplier from column 4; if it is for FY 2001, enter the employment multiplier from column 5; and if it is for FY 2001, enter the employment multiplier from column 6.

Line 43: Multiply the dollar amount entered on line 41 by the employment multiplier entered on line 42 to estimate the employment impact of spending by the institution.

Part Four | Estimating the Total Economic Impact of All Spending

Lines 44, 45, 46, and 47: On line 44, enter the amount on line 3. On line 45, enter the amount on line 13. On line 46, enter the amount on line 34. Add the amounts on lines 44, 45, and 46 and enter the total on line 47.

Lines 48, 49, 50, and 51: On line 48, enter the amount on line 5. On line 49, enter the amount on line 15. On line 50, enter the amount on line 36. Add the amounts on lines 48, 49, and 50 and enter the total on line 51.

Lines 52, 53, 54, and 55: On line 52, enter the amount on line 7. On line 53, enter the amount on line 17. On line 54, enter the amount on line 38. Add the amounts on lines 52, 53, and 54 and enter the total on line 55.

Lines 56, 57, 58, and 59: On line 56, enter the amount on line 9. On line 57, enter the amount on line 19. On line 58, enter the amount on line 40. Add the amounts on lines 56, 57, and 58 and enter the total on line 59.

Lines 60, 61, 62, and 63: On line 60, enter the amount on line 12. On line 61, enter the amount on line 22. On line 62, enter the amount on line 43. Add the amounts on lines 60, 61, and 62 and enter the total on line 63.

#### APPENDIX TWO: STUDY AREAS FOR INSTITUTIONS

#### **Universities and Regional Universities**

Georgia Institute of Technology — Atlanta MSA

Georgia State University — Atlanta MSA

Medical College of Georgia — Columbia, Lincoln, McDuffie, and Richmond

University of Georgia — Barrow, Clarke, Jackson, Madison, Oconee, and Oglethorpe

Georgia Southern University — Bryan, Bulloch, Candler, Effingham, Evans, Jenkins, Screven

Valdosta State University — Berrien, Brooks, Cook, Echols, Lanier, Lowndes

#### **State Colleges and Universities**

Albany State University — Baker, Calhoun, Dougherty, Lee, Mitchell, Terrell, and Worth

Armstrong Atlantic State University — Bryan, Chatham, Effingham, and Liberty

Augusta State University — Columbia, Lincoln, McDuffie, and Richmond

Clayton College & State University — Atlanta MSA

Columbus State University — Chattahoochee, Harris, Marion, Muscogee, Stewart, and Talbot

Fort Valley State University — Bibb, Crawford, Houston, Jones, Macon, Peach, and Twiggs

Georgia College and State University — Baldwin, Hancock, Jones, Putnam, Washington, and Wilkinson

Georgia Southwestern State University — Crisp, Dooley, Lee, Macon, Sumter, Terrell, Schely, and Webster

Kennesaw State University — Atlanta MSA

North Georgia College & State University — Dawson, Hall, Lumpkin, Union, and White

Savannah State University — Bryan, Chatham, Effingham, and Liberty

Southern Polytechnic State University — Atlanta MSA

State University of West Georgia — Carroll, Coweta, Douglas, Haralson, and Heard

#### **Associate Degree Colleges**

Abraham Baldwin Agric. College — Berrien, Colquitt, Cook, Irwin, Tift, Turner, and Worth

Atlanta Metropolitan College — Atlanta MSA

**Bainbridge College** — Decatur, Grady, Miller, Mitchell, and Seminole

Coastal Georgia Community College — Brantley, Camden, Glynn, McIntosh, and Wayne

Dalton College — Catoosa, Goron, Murray, Walker, and Whitfield

**Darton College** — Baker, Calhoun, Dougherty, Lee, Mitchell, Terrell, Worth

DeKalb College — Atlanta MSA

East Georgia College — Burke, Candler, Emanuel, Jerrerson, Jenkins, Johnson, and Treutlen

Floyd College — Bartow, Chattooga, Floyd, Gordon, and Polk

Gainesville College — Banks, Dawson, Forsyth, Gwinnett, Habersham, Hall, Jackson, Lumpkin, and White

Gordon College — Butts, Lamar, Monroe, Pike, Spalding, and Upson

Macon State College — Bibb, Crawford, Houston, Jones, Monroe, Peach, and Twiggs

Middle Georgia College — Bleckley, Dodge, Laurens, Pulaski, Twiggs

South Georgia College — Atkinson, Bacon, Ben Hill, Coffee, Irwin, Jeff Davis, Telfair, and Ware

Waycross College — Atkinson, Bacon, Brantley, Charlton, Clinch, Coffee, Pierce, and Ware

# Exhibit A-1 Economic Impact Template

## PART ONE Estimating the Economic Impact of Spending by the Institution

1.	Expenditures Budget Unit "A"	1	
2.	Expenditures Budget Unit "B"	2	
3.	Initial Spending. Add lines 1 and 2	3	
4.	Output Multiplier. See Column 1 of Exhibit A-2	4	
5.	Output Impact. Multiply line 3 by line 4	5	
6.	Value-Added Multiplier. See Column 2 of Exhibit A-2	6	
7.	Value-Added Impact. Multiply line 3 by line 6	7.	
8.	Labor Income Multiplier. See Column 3 of Exhibit A-2	8	
9.	Labor Income Impact. Multiply line 3 by line 8	9	
10.	Initial Spending Expressed in millions of dollars.		
	Divide line 3 by 1,000,000	10	
11.	Employment Multiplier		
	If FY 2000 see Column 4 of Exhibit A-2 If FY 2001 see Column 5 of Exhibit A-2		
	If FY 2002 see Column 6 of Exhibit A-2	11	
12.	Employment Impact. Multply line 10 by line 11	12
